

## Crane Operator Certification Windsor

Crane Operator Certification Windsor - The process to enable you in order to operate particular types of cranes is to take crane operator certification training to be given certification. The certification process incorporates classroom learning, hands-on practice and an aptitude evaluation. Several training programs are offered for mobile cranes, overhead cranes, forklifts, boom trucks, tower cranes and various hoisting machinery. Trainees would learn the basics of safety, equipment characteristics, and operational practices associated with these types of cranes.

### Customized Practical Training and Evaluation:

Businesses can request customized practical training and evaluation on-site at the work facility after the in-class session. Two operators will be trained at a time by one instructor. The length of time needed for training will differ depending on the employer's levels of ability and machine type, but normally requires an hour or two. The training would focus on practical skills such as planning the lift, right rigging practices and safe operating procedures. Employers should pre-schedule the on-site session.

Following in-class instruction, practical operating instruction and evaluation, and written examination, the trainee will be given an individual wallet certificate and the company would receive a wall certificate. To get certification, trainees have to have an 80 percent passing score on both practical and written tests.

Included in the crane operator certification program is the following: Manuals, policies and regulations; dangers of high voltage; safety issues; emergency rescue procedures; communications and signals; pre-operational inspection; types, components and terms; pre-lift planning and set-up; crane configuration and capacity; wire rope and rigging; hammerhead / luffing jib crane operations; climbing cranes; fall protection; CPR & First aid; WHMIS and crane maintenance.

The minimum basics for becoming an overhead crane operator consist of possessing the mental and physical capability considered necessary to be able to do crane work. Necessary capabilities include normal field of vision, depth perception, coordination, manual dexterity and reaction time. Prospective operators must not have the tendency to become dizzy. Operators who do not already have proof of experience and qualifications should achieve certification. Operators need to be qualified in order to operate the particular kind of equipment that they will be making use of to carry out their work.
